In the Claims:

1-20. (Canceled)

21. (Previously Presented) A method of sealing an annular area in a wellbore, comprising:

providing a tubular member; and

deforming the tubular member in a manner whereby an outer surface of the tubular member assumes a shape of a non-uniform surrounding surface and forms a seal therebetween.

- 22. (Previously Presented) The method of claim 21, wherein a ductile material disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 23. (Previously Presented) The method of claim 21, wherein a ductile metal disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 24. (Previously Presented) The method of claim 21, wherein an elastomer disposed on the outer surface of the tubular member forms the seal after deforming the tubular member.
- 25. (New) A method of forming a profile in a section of tubing within a wellbore, comprising:

providing an expander device having at least one radially extendable expander member;

positioning the expander device in the wellbore at a predetermined location in the section of tubing; and

extending the member to deform the tubing at said location to create the profile in the internal face of the tubing.

- 26. (New) The method of claim 25, wherein the profile is in the form of at least one annular recess.
- 27. (New) The method of claim 25, wherein the tubing is deformed by rolling expansion, the expander member being rotated within the tubing with a face in rolling contact with an internal face of the tubing.
- 28. (New) The method of claim 25, wherein the tubing is deformed by compressive plastic deformation, producing a localised reduction in wall thickness and a subsequent increase in tubing diameter.
- 29. (New) The method of claim 25, wherein the tubing is deformed by compressive plastic deformation, producing flow of wall material to create the profile.
- 30. (New) The method of claim 25, wherein the expander member is in the form of a roller.
- 31. (New) The method of claim 25, wherein the expander member is extended by application of fluid pressure.
- 32. (New) The method of claim 25, wherein a plurality of radially extendable expander members are provided.
- 33. (New) The method of claim 25, wherein the expander is rotated to create the profile.
